AUTHOR: Ioanin, Gh.

TITLE: The synthesis of circuits containing a relay, the operation current and dropout current of which show a great difference

PERIODICAL: Referativnyy zhurnal, Matematika, no. 3, 1962, 54, abstract 3V285. ("Comun. Acad. RPR", 1960, 10, no. 1, 12-15)

TEXT: A relay with an essential difference between the operation and the dropout current is considered. It is shown that the working of this relay is similar to the working of an ordinary relay with blocking. If the first relay is connected into a circuit with the structure formula

$$F(X) = (a + \bar{b}R)X \quad (1)$$

where R is the additional resistance, then the structure formula of the corresponding circuit with blocking has the form

$$F(X) = (a + \bar{b}x)X, \quad (2)$$

Because of the equivalence of the working of the circuit with the

Card 1/2

S/044/62/000/003/078/092
0111/C333

The synthesis of circuits ...

structure formulas (1) and (2) it holds the identity

$$xX \equiv X^* \quad (3)$$

By application of the negation to both parts of the identity (3) one obtains

$$\bar{x} + X \equiv X^* \quad (4)$$

It is mentioned that (4) gives a transformation which allows to pass from circuits with one relay type to circuits with another relay type in which the successive cut-in of the relay windings is used. Two examples for the transformation of circuits are given.

Title : The structure of gramicidin C. Part 1.- Reduction of gramicidin C.

Periodical : Zhur. ob. khim. 24/2, 364-369, Feb 1954

Abstract : The existence in gramicidin C of two diketopiperazines and tripeptide fragments, the first one of which contains proline, was established experimentally. The peptides found in the products of incomplete gramicidin C hydrolysis are listed. The structural formula for the gramicidin C monomer is presented. Various characteristics of gramicidin C are described. Twelve references: 8-USSR; and 1-French; 3-USA (1939-1953). Tables.

On the Amount of Cyclic α -Amino Bonds of Amino Acids in Some
Proteins

Original

Periodical: Zh. obshch. khimii, 1955, 25, No 9, 1802-1812

Abstract: On electric reduction (ER) of derivatives of diketopiperazines (DP)
2 reactions occur: in the case of aminoacyl-DP there are formed
piperazines of peptides; in the case of amidine derivatives of DP
ER is accompanied by formation of free piperazines and a splitting
off of peptides terminal amino group of which can be determined
by the gasometric method. ER was carried out at a movable mercury
electrode according to the method of Gavrilov and Koperina (Zh.
obshch. khimii, 1947, 17, 955, 1651). Changes in procedure involve

Card 1/3

Abstract: formol titration (see Referat Zhur - Khimiya, 1956, 15158) and de-
termination of N-NH₂ gasometrically according to the micro-modifica-
tion (Referat Zhur - Khimiya, 1954, 47727). Subjected to ER were
gelatin (I), gliadin (II), casein (III), edestin (IV), plastain
from III (V) and gramicidin C (VI). A quantitative determination
has been made of the correlation between nitrogen of DP found in
the molecules of various proteins and the nitrogen of tripeptides
(TP). The ratio of DP to TP in different proteins is as follows:
I 1:1, II 1:1, III 3:4, IV 2:3, V 1:2 and VI (dimer) 2:2. Found
were the following amounts (in %) of N-NH₂ of the
total (in parentheses is shown the amount that could be formed
if an amidin linkage is present in the protein structure): I 17.9
(11.8), II 17.6 (13.8), III 14 (15.3), IV 13.9 (13.8), V 14.4
(16.2), VI 13.9 (16.1). Respectively, N of DP in % of total N were
found to be 27.6; 46.8; 31.03; 30.9; 23.1 and 40.0. Procedures
used for the analysis of protein hydrolysates before and after ER
were checked with an artificial mixture of amino acids correspond-
ing to the composition of III. Formol titration with the use of

Title : Effect of inner pressure on longitudinal stability of the bottom portion of the drilling column at turbine drilling

Periodical : Neft. Khoz., v. 32, #4, 5-8, Ap 1954

Abstract : The author replies to B. B. Dadashev's critical comments on the author's book Theory and Technique of Turbine Drilling and also on M. T. Gusman's book Turbine Drilling of Oil Wells. The comments concern erroneous conclusions on the positive effect of pressure drop in the turbo-drill on the longitudinal stability of the bottom part of the drilling column. On the other hand, the author indicates a substantial error made by Dadashev in his theoretical formulation of acting forces as well as in his conclusions. The correctness of the author's analysis was confirmed by experiments conducted by his associates G. A. Lyubimov, V. L. Il'skiy and R. M. Eygeles.

Title : More rational production organization is required for oil well drilling

Periodical : Neft. Khoz., v. 32, #7, 6-9, J1 1954

Abstract : Discussion of the article "Some problems on the organization of work in oil well drilling" by M. A. Saakov, (Neft. Khoz., #11, 1953).

According to Saakov, the basic production unit covers the territory of the whole oil field, including assembly crew, repair brigades, material and pipe supplies and drillers' crew. Contrary to this opinion the authors consider that the office of the oil well drilling is a controlling center and other services such as geological prospecting, assembling, repair etc., are auxiliary services and must be controlled by the so-called "Chief controlling foreman".

SOV/93-58-9-13/17

AUTHOR: Ioannesyan, R.A.

TITLE: Problems of Turbine Drilling (Problemy turbinnogo
bureniya)

PERIODICAL: Neftyanoye khozyaystvo, 1958³⁶, Nr 9, pp 62-67 (USSR)

ABSTRACT: The author analyzes the problems encountered in turbine drilling and suggests methods for their solution. He states that inefficiency in turbine drilling is often due to nonuniformity in the parameters of the manifold, drill pipe, turbodrill, bit, turbine and well. These defects can be eliminated by selecting the units according to standards suggested in Tables 1-3. The author's suggestions for raising the efficiency in turbine drilling are not applicable to deep wells in which the crushing capacity of the rock bit deteriorates due to increased hydrostatic pressure. The drilling of deep wells by the turbine method will be improved with the aid of diamond bits which have been successfully employed in France and found to be very effective by the VNIIBT Institute. Fig. 1 and Table 4 present a T12M3-7 1/2" turbodrill

Problems of Turbine Drilling (Cont.)

designed for drilling with a diamond bit. Experiments are being conducted in the Soviet Union with a hydro-turbotachometer for recording the number of turbodrill revolutions in drilling. The author states that the creation of an efficient tachometer will enable them to automatize the turbine drilling process. This report was delivered by the author at the 5th Congress of Hydraulic Engineers, held in Provence, France from July 23 to 28. There are 4 tables and 1 figure.

TITLE: On the use of sequential statistical analysis in measurement of nuclear radiation

SOURCE: Ref. zh. Fizika, Abs. 1A502

REF SOURCE: Tr. Soyuzn. n.-i. in-ta priborostr. vyp. 1, 1964, 213-232

TOPIC TAGS: nuclear radiation, radiation measurement, statistic analysis
ABSTRACT: The authors consider the application of the method of sequential statistical analysis for sorting radioactive samples by their activity. For the case of a Poisson distribution, this problem can be formulated in the following manner. If m pulses were registered in a time $t = T$ and if $m < N$ (where N is the limiting number of pulses), then hypothesis H_1 is assumed, and if $m = N$ after $t < T$, then hypothesis H_2 is assumed. In the method of sequential statistical analysis, the choice between the hypotheses reduces to a verification of the inequality (A. Wald, Sequential Analysis, Wiley, N.Y. 1947) $\ln B < Z < \ln A$ (1), where Z is the logarithm of the likelihood ratio, and the numbers A and B are determined from the relations $A = (1 - a_2)/a_1$ and $B = a_2/(1 - a_1)$, where a_1 and a_2 are probabilities determined by the formulas

$$a_2 = \int_0^{\text{threshold}} f(x\lambda_2) dx \text{ and } a_1 = \int_{\text{threshold}}^{\infty} f(x\lambda_1) dx.$$

APPROVED FOR RELEASE: 08/10/2001
The known probability density function, and the hypothesis H_1 is satisfied. The verification continues until inequality (1) is satisfied. Formulas are presented for the time $A(\lambda)$, the number of pulses m and the average measurement time $A(\lambda)$. Some graphical interpretation and consequences of these formulas are presented. TITLE: Corrosion resistant steel-aluminum wire. Class 21, No. 170094

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 8, 1965, 30

TOPIC TAGS: corrosion protection, aluminum, steel

ABSTRACT: This Author's Certificate introduces a corrosion resistant steel-aluminum wire containing a steel core covered with an insulating material laid over with a cable of aluminum wires. The operational characteristics are improved by using transparent plastic for the insulation material and soaking the entire wire in a solution which contains 95% cerisin and 5% petrolatum.

Rationalization of the well drilling method with shafts
deflected horizontally
Periodical : Neft. khoz., v. 33, #11, 32-34, N 1955
Abstract : The author describes the drilling method of horizontally
deflecting the oil well shaft after it enters the producing
horizon so that it will follow the trend of the bedding
plane of the oil-yielding formation and thus provide a
greater drainage surface with the reservoir rock. Careful
analysis of cores properly indicates whether the shaft's
drilling direction follow the petroliferous strata.

TOPIC TAGS: reflector telescope, light gathering power, parabolic mirror

ABSTRACT: This reflector is the result of modern needs to build telescopic systems with greater light-gathering ability. It was built at the GOMZ factory in 1954 for the Kry*mskaya astrofizicheskaya observatoriya (Crimean Astrophysical Observatory). The complex problems of building such reflectors are clear, a number of definite requirements facing the designer. The principal mirror of the reflector must be parabolic with the proper diameter (2.6 m) and the aperture ratio must be 1 : 4. Three corrective lenses are needed in addition to the mirror system in order to increase the working field and to give variation in aperture ratio. The author discusses the optical system, the mounting, the telescope tube, the control system, the focusing adjustment, and the temperature conditions of the reflector.
